DIAGRAM

SAFE NETWORK Proposes an CCTV monitoring solution that can monitor environment and Backup Footage. Solution propose to install a 3 Major Location along with Local Footage Backup and Optional CCTV Monitoring through Internet

The CCTV monitoring device will have a web interface so the users can login to the device. Uses will be created on each device to manage/monitor their offices. Users can be given rights only for monitoring. In case of having multiple monitoring devices, central management software will enable the configuration of all devices from a central location.

Alerts can be configured to inform exceed in a given threshold and returning to normal status. So, the authorities will be aware of what is happening in the remote Location.
